EXCALIBUR - CABINET WATER SOFTENERS

Quality through innovation

What is Hard Water?

Water containing calcium and magnesium is hard water. Hard water can lead to numerous issues in your home. When mineral deposits from hard water create scale buildup in your appliances, they start to work less efficiently. Dishware will develop a cloudy appearance, clothing won't be cleaned properly no matter how much detergent is used, and soap scum will start to appear in your kitchen and bathroom. As deposits build up in your pipes, the flow of water becomes constricted, eventually leading to a backup which can be expensive to fix.

All of these hard water issues can be solved with a water softener from Excalibur Water Systems. Available in cabinet design, these compact systems provide soft water without taking up an inordinate amount of space in your home. The life of your appliances will be extended, your dishware will shine, and your clothing will be bright and clean.

Choose Excalibur

Choose a system you and your family can depend on with water softeners that are backed by the best warranties in the industry.

*You deserve
soft water*

Optional cabinet lid is available:

Chlor-A-Soft Series Water Softener Plus

Why choose between a filtration system and a water softener when you can have both? The Chlor-A-Soft™ Series high efficiency water softener from Excalibur Water Systems is the top-selling municipal water combination system that blends two medias together, providing soft water plus chlorine and chemical filtration, all in one system. **For municipal water supplies only.**

20 Year Unlimited Warranty
